

Before

Conventional Workflow

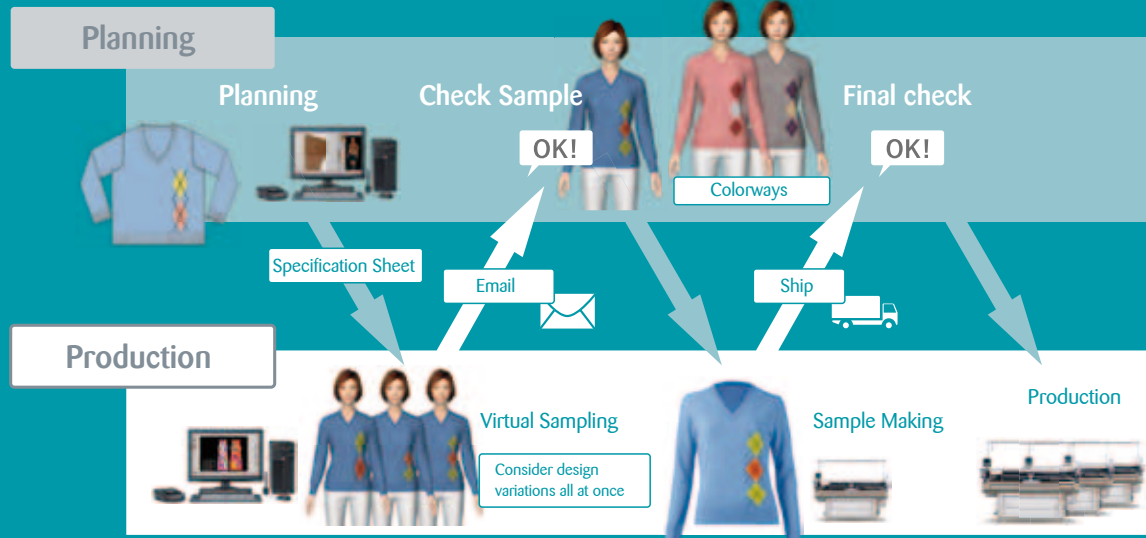

Conventionally, a significant amount of time and cost is spent among product planning and production departments, for repeatedly checking and modifying such design elements as pattern, silhouette, color and texture.

Production Time

1 Day ~ 2 Weeks

1 ~ 2 Months

Time

Cost

Quality

By taking advantage of the capabilities of SDS®-ONE APEX3, it is possible for both planning and production to share a clear image of the design before an actual sample is produced, drastically improving efficiency in the production process. In doing so, significant time compression is achieved from product planning to sample making, allowing quick response to fashion trends and early market penetration of products. Costs associated with sample making such as labor, materials and shipping fees are minimized as well. Finally, by being able to visualize the finished garment beforehand, higher quality can be achieved in the sample making stage.
