The following is an introduction to noteworthy feature of APEXFiz Design software version V-05B.

Extracting patterns from fitting data created in other 3D software

■ Supported Plans: Design-Knit Design Pro 3D (option)

By importing fitting data created in other 3D software, you can extract patterns and perform knit design directly to that data. Using yarn data from scanning actual yarns, it is possible to produce fabric simulations with realistic texture of materials. As a result, you will be able to create 3D virtual sample images in amazingly high quality.
